### Company history/background

#### Supported living

The fast-growing care provider in question is active in supported living, for, among others, people (including young people) with a mild intellectual disability.

The focus is on offering a total concept with, among other things, inclusivity as an important starting point and

advanced home automation as a key component (smart living).

The ambition is to be active throughout the Netherlands.

The organization is currently active exclusively in the Randstad. However, the ambition is to roll out its distinctive concept at various locations throughout the Netherlands.

The overall concept features an approach that is differentiated according to urban or rural living environments.

## Unique selling points

Three million in revenue and growing

The care solutions of this care provider are reimbursed under the Wlz (Long-Term Care Act).

The demand for this care combined with suitable housing is high.

For that reason, the organization in question also focuses on searching for, developing, and operating suitable locations. The growth opportunities are substantial.

## Other

Participation and smart financing

The total financing requirement through participation in equity amounts to 300K to 500K Euro. In addition, the organization is interested in smart financing solutions for making and keeping working capital available.

Active contribution (including MBI) is preferred, preferably by a party that knows the healthcare sector in the Netherlands well.
