Company history/background

The physiotherapy practice has been established in Gelderland for many years and has built up a stable position within the regional healthcare market during that period. The practice has a consistent patient base and a full schedule. Revenue has remained stable in recent years and has grown further to approximately €500,000 per year. The proposed acquisition is related to the approaching retirement age of the current owner/practice manager.

The company operates a full-time physiotherapy practice with 8 employees. The practice focuses on providing high-quality physiotherapeutic care to a broad patient base. Treatments are offered in multiple treatment rooms from a modern practice location. The practice collaborates well with general practitioners and has a stable patient flow.

Unique selling points

The practice distinguishes itself through the combination of a full schedule, an existing and stable patient base, a modern location, and financially sound business operations. For a buyer, this offers the opportunity to step directly into a well-performing practice, without the usual start-up phase and associated risks. Additionally, there is room for further growth, for example by hiring additional staff or further utilizing available treatment capacity.

Other

The practice is located in rented premises and has available treatment rooms. The acquisition price consists of goodwill for the patient base and the partnership share. The exact terms, availability, and transfer date are negotiable. A thorough handover and induction period are possible, ensuring that patients, staff, and partners can count on a smooth transition.
