## Company history/background

Automatic preparation of hot meals with restaurant quality

An entrepreneur with a background in electromechanical engineering has developed an advanced vending machine that prepares restaurant-quality hot meals within minutes.

The machine is robustly designed and suitable for both indoor and outdoor locations, and operates practically 24/7.

A fully automated restaurant

Instead of sales, the machines are installed in collaboration with site owners. The appearance is customizable, and the product range and maintenance are managed internally. This guarantees consistent, high quality and minimal downtime.

In addition to hot meals, the vending machine offers chilled soft drinks, and there is room for expansion, such as soups. The machine operates completely cashless.

## Unique selling points

Capital sought to realize the market launch

To make the vending machine market-ready, the entrepreneur is seeking a strategic-financial partner.

Preference is given to informal investors with experience or affinity in the food sector, but market parties can also join at this stage.

## Other

300K Euro capital in this phase

The entrepreneur is seeking a strategic financial partner willing to strengthen working capital by 300,000 euros.

Added value, complementarity, and equity participation are certainly open for discussion.
