The activity focuses on the development and operation of a digital technology platform for the healthcare sector. The platform supports healthcare organizations in optimizing and digitizing both patient-centered pathways and organization-wide processes. By integrating various functionalities into a single ecosystem, it offers a comprehensive solution for digital healthcare support.

Unique selling points

The technology is widely applicable across various healthcare domains and can be applied in diverse

environments, ranging from specialist departments to chain-wide care processes. Thanks to the flexible and scalable architecture, the platform can be easily adapted and expanded with new applications, allowing it to respond to the dynamics and changing needs within the healthcare sector.

In addition, the platform forms a strong foundation for data-driven care. It facilitates the collection, analysis, and utilization of data, with opportunities for further integration and expansion of analytical applications. In doing so, it supports healthcare organizations in improving quality, efficiency, and decision-making.

Other

The activities are carried out from an efficient and lean organization, focused on continuous product development and sustainable growth. Due to the generic and configurable design of the software, the platform is suitable for scaling up, both within existing markets and internationally.
